

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A speaker device comprising:
 - a cabinet;
 - a speaker unit attached to ~~the~~ said cabinet;
 - a ~~first~~ container removably attached to a ~~first~~ an opening ~~formed in the~~ said cabinet; and
 - an adsorbent material ~~disposed~~ in an interior of ~~the first~~ said container, wherein said container has an air hole for ~~passing~~ allowing air to pass between the interior of ~~the first~~ said container and an interior of ~~the~~ said cabinet ~~is formed through the first container.~~

2. (Currently Amended) The speaker device according to claim 1, wherein ~~the~~ said adsorbent material is an activated carbon.

3. (Currently Amended) The speaker device according to claim 1, wherein said container comprises a first container, and said opening in said cabinet comprises a first opening, further comprising:
 - a second container removably attached to a second opening formed in ~~the~~ said cabinet;
 - and
 - a deterioration prevention material for adsorbing a substance having a deteriorating effect on said adsorbent material, said deterioration prevention material being located ~~disposed~~ in an interior of ~~the~~ said second container, wherein
 - an air hole for passing air between the interior of the second container and the interior of ~~the~~ said cabinet ~~is~~ is formed through ~~the~~ said second container.

4. (Currently Amended) The speaker device according to claim 3, wherein ~~the~~ said deterioration prevention material is silica gel.

5. (Currently Amended) The speaker device according to claim 3, further comprising a port for passing allowing air to pass between the interior and an exterior of ~~the~~ said cabinet, wherein
the said deterioration prevention material ~~provided in the~~ said second container is ~~disposed~~ located at a position such that ~~the~~ said deterioration prevention material is closer to an opening ~~which is in the~~ said interior of ~~the~~ said cabinet and formed by ~~the~~ said port, than ~~the~~ said first container.
6. (Currently Amended) The speaker device according to claim 3, wherein
the said deterioration prevention material includes cobalt chloride, and
the said second container is formed such that ~~the~~ said deterioration prevention material is capable of being seen from an exterior of ~~the~~ said second container.
7. (Currently Amended) The speaker device according to claim 3, wherein
a heat resistant temperature of ~~the~~ said second container is higher than or equal to a boiling point of a ~~the~~ substance to be adsorbed into ~~the~~ said deterioration prevention material.
8. (Currently Amended) The speaker device according to claim 3, wherein
the said deterioration prevention material includes a photocatalyst.
9. (Currently Amended) The speaker device according to claim 1, further comprising:
a tubular port ~~disposed for passing~~ for allowing air to pass between the interior and the exterior of ~~the~~ said cabinet;
a deterioration prevention material; and
a supporting member, ~~removably attached to an interior of the port,~~ for supporting ~~the~~ said deterioration prevention material, said supporting member being removably attached to an interior of said port.

10. (Currently Amended - Withdrawn) The speaker device according to claim 1, further comprising:

a shock-absorbing member ~~disposed at an attachment portion, of the first container,~~
~~provided~~ for attaching ~~the~~ said first container to ~~the~~ said cabinet, said shock-absorbing member
being located at an attachment portion of said container; and

a fixing tool, ~~mounted on the cabinet,~~ for removably fixing ~~the first~~ said container ~~thereto~~
to said cabinet such that ~~the first~~ said container presses against ~~the~~ said cabinet through ~~the~~ said
shock-absorbing member, said fixing tool being mounted on said cabinet.

11. (Currently Amended - Withdrawn) The speaker device according to claim 1, further comprising

a shock-absorbing member ~~disposed~~ on an inner face of ~~the~~ said cabinet, and

a fixing tool for fixing ~~the first~~ said container ~~thereto~~ to said inner face of said cabinet
such that ~~the first~~ said container presses against ~~the~~ said inner face of ~~the~~ said cabinet through ~~the~~
said shock-absorbing member.

12. (Currently Amended - Withdrawn) The speaker device according to claim 1, wherein

~~the first~~ said container includes an opening and closing part for opening and closing ~~an~~
said opening formed in ~~the first~~ said container.

13. (Currently Amended - Withdrawn) The speaker device according to claim 1, wherein

~~the~~ said cabinet includes an opening and closing part for opening and closing ~~the first~~ said
opening, and ~~the first~~ said container is ~~disposed~~ in the interior of ~~the~~ said cabinet.

14. (Currently Amended - Withdrawn) The speaker device according to claim 1, wherein

a heat resistant temperature of ~~the first~~ said container is higher than or equal to a boiling
point of a substance to be adsorbed into ~~the~~ said adsorbent material.

15. (Currently Amended - Withdrawn) The speaker device according to claim 1, wherein ~~the~~ said adsorbent material includes a photocatalyst.

16. (Currently Amended - Withdrawn) The speaker device according to claim 1, further comprising:

a measurement ~~means~~ device for measuring frequency response of an electrical impedance of ~~the~~ said speaker unit by inputting an electrical signal to ~~the~~ said speaker unit; and

a notification ~~means~~ device for ~~notifying~~ providing a notification indicating that a peak value of the frequency response is shifted to a high frequency side by a predetermined frequency based on the frequency response measured by said measurement device.

17. (Currently Amended - Withdrawn) The speaker device according to claim 1, further comprising:

a measurement ~~means~~ device for measuring a sound pressure frequency response of ~~the~~ said speaker unit by inputting an electrical signal to ~~the~~ said speaker unit; and

a notification ~~means~~ device for ~~notifying~~ providing a notification indicating that a bass reproduction limit of the sound pressure frequency response is shifted to a high frequency side by a predetermined frequency based on the pressure frequency measured by said measurement device.

18. (Currently Amended - Withdrawn) A vehicle comprising:

~~the~~ said speaker device described in claim 1; and

a vehicle body with ~~the~~ said speaker device ~~disposed~~ in an interior thereof.

19. (Currently Amended - Withdrawn) A video device comprising:

~~the~~ said speaker device described in claim 1; and

a device housing with ~~the~~ said speaker device ~~disposed~~ in an interior thereof.

20. (New) The speaker device according to claim 1, wherein said container comprises a cartridge shaped and arranged to be removably inserted into said opening in said cabinet so as to form a closure for said opening while simultaneously exposing said adsorbent material to an atmosphere within said cabinet when said cartridge is located in said opening.
